

Remember David and Goliath?

AgileMesh has the world's most rapidly deployable video surveillance system for use in real-world situations. We challenge anyone to deploy a tactical surveillance system with the following realistic conditions more quickly:

- Several devices configured differently that need to be reconfigured to communicate together
- One frequency band switched to another to escape RF interference
- System configured and deployed by nontechnical team members
- Diverse camera types to be employed (IP, analog, and speciality, such as Remington Eyeball, bomb robot, etc.)

AgileMesh challenges other rapidly deployable surveillance system providers to a head-to-head competition. \$10,000 – winner takes all.

**BRING IT ON.
ANYTIME. ANYPLACE.**

RAPIDLY DEPLOYABLE SURVEILLANCE SYSTEMS™
